

CAN THE HYPERVERSE MAKE OUR FUTURE HAPPIER?

Keno Oneo in Conversation with Jochen Franck

Keno: We concluded our last conversation with a very important question. Is the Metaverse a kind of backward escape into the old dimensions of religion and metaphysics, while AGI, cyborgs and post-humanism organize the actually decisive breakthroughs to the 2nd Axial-Age?

To put it in a slightly different way: is the Idealistic-Humanism (= applied Noetic) of the Hyperverse a strange or cowardly form of "shirking-religion", which is celebrated in the current and modern reality of digitality, but which ... well camouflaged ... activates and popularizes a massive No to progress?

From this perspective, a successful Hyperverse with millions or billions of users would be a reprehensible kind of transformation to stupidity.

Franck: Yes. From this point of view, the Hyperverse could be accused of posing as an opponent of AGI, Cyborg, and Post-Humanism. What is your opinion? Is that true?

Keno: Let's first look at some of Metaverse's central postulates and concepts, and then compare them to AGI's concepts:

- 1.- We need a new kind of Future-Intelligence that enables us to have an Inclusive-Fitness. That is, a mental fitness that can permanently connect our Consciousness to the Source of Becoming-Better. We know or suspect that this Source as "Unmarked-Space" is not present in our world of cognition ("Marked-Space").
- 2.- The problem we have is that our intelligence and our cognition strategies inevitably create those borders that separate the "Marked-Space" from the "Unmarked-Space". That means: We want to spiritually cooperate with the Unmarked-Space, because we suspect that something like the Now-of-Creation could exist and be active there.
- 3.- But at the moment we only have the stratified Marked-Space (=1st Reality-Generator. This Marked-Space obeys our Mind (e.g. because of the use of thinking). But this Marked-Space cannot be commissioned by us to dissolve the border that separates our Marked-Space from the Unmarked-Space:

**The 1st Reality-Generator
cannot recognize those borders,
which it permanently produces.**

- 4.- Religion (faith) has not been able to dissolve this Border. Science (Logic) also cannot dissolve this Border.

- 5.- So we will be forced to instrumentalize the Border spiritually. This Instrumentalization has the task to make the Third out of the Border. The Third is that which exists in order not to exist. That's the paradox problem. This Paradox unites in itself the pure Potentiality and Sum of all Possibilities.

This Paradox of the Third closes itself to the logic of thinking and the strategies of cognition of the 1st Reality-Generator ... thus of the Marked-Space. It looks as if the human Spirit is incapable to resolve the Paradox-Problem.

- 6.- In the Third ... so is the Hypothesis of Noetic ... that Emergent-Consciousness is born, which we humans need for our spiritual Evolution. So the key could be hidden in the Paradox of the Third, which resolves the Paradox ... Shared-Nagual.

- 7.- So far, geniuses, pioneers and great thinkers have used this third to advance us culturally-spiritually as humanity. This is the reality of our evolution.

In the future, we will probably need a direct, more intensive and continuous Cooperation with the Third. That means: We will have to invent something that can make us and our Marked-Space a Cooperation Partner for the Third: We will have to invent Co-Evolution.

- 8.- AGI, Cyborg and Post-Humanism can be understood as intelligent and ambitious strategies that we develop as humanity to be able to develop intelligence on a high level beyond the Third.

- 9.- AGI, Cyborg and Post-Humanism bet on the ambition that algorithmic programs that can combine logical learning and illogical experimentation will be able to discover the hidden key to Emergent-Consciousness and make it usable.

- 10.-Ultimately, AGI, Cyborg and Post-Humanism seek to instrumentalize the specific human intelligence that we have built upon, among other things,

- Neo-Positivism,
- Teleonomy,
- Predictability,

in the AGI-Machines in such a way that the AGI-Machines can develop that Consciousness which is superior to that Intelligence which we can generate in our 1st Reality-Generator.

- 11.-There is nothing wrong with this objective. Especially not, if one assumes that the combination " Man plus 1st Reality-Generator" will not be able ... so to say on the classical way ... to produce that Emergent-Consciousness, which cooperatively connects us with the Source of Becoming-Better (= the Third).

In other words: if our present intelligence fails, we will have to invent systems with this intelligence that can do what we cannot. Nothing else is AGI.

12.-That' s as far as AGI, Cyborg, and Post-Humanism go.

Let us now look at the Hyperverse. Here one does not rely on the production of an algorithmic intelligence that organizes learning and experimental (illogical) behavior in such a way that processes of self-generation develop (as if by themselves), thereby inventing and instrumentalizing spiritual levels that are placed beyond human consciousness.

Hyperverse does not want to generate an emergent, i.e. abstract Cyborg-Consciousness, but a Consciousness for direct Engagement in Creation.

13.-So a Creation-relevant Consciousness, which arises from the fact that the Now-Mind of the human being behaves cooperatively in the Now-of-Creation (Nagual) in such a way that successively a Common-Nagual arises:

Shared-Nagual.

14.-The purpose of the Hyperverse is thus to make the Spirit (Mind) of the human being more and more the spiritual Co-Creator, i.e. to make the Mind the Co-Producer of the "eternal Source of Becoming-Better": The Third is jointly transformed into this Source of Better ... to the Shared-Nagual.

15.-The more powerful this Nagual-Source of the Better becomes, the more formative it becomes for the Collective-Consciousness of Humanity. There are two parallel streams:

The individual Nagual-Mind becomes a Co-Creator of the Source of Better in the reality of digital Bottom-up Rhizomes.

Through the collaborative Creativity Processes performed by humans in the digital Bottom-up Rhizomes (on a daily basis), the Brain Programs of Humans are expanded and permanently qualified.

16.-As a formula: Through Hyperverse Humanity gets a system (called "Creation-Generator") at its service, which permanently produces that Emergent-Consciousness as Shared-Nagual, which permanently supports and optimizngly accompanies the Mind and the Brain in their positive Evolution.

17.-In this way the concept of Hyperverse differs drastically from the concept of AGI, Cyborg and Post-Humanism: In Hyperverse the human Consciousness evolves more and more into the Self-Dynamics of the Now-of-Creation. This is the strategy of Inclusive-Fitness:

**Humanity transforms into
the living Now-of-Creation.**

With AGI, Cyborg and Post-Humanism, Human-Consciousness is increasingly marginalizing itself from its own Evolution of Consciousness, by following the emergent Evolution of Consciousness of the AGI-Machines. This is the strategy of Exclusive-Fitness:

**Humanity delegates
the Evolution of its Consciousness
to a non-human System.**

Franck: Exclusive-Fitness. This means that those Emergent-Consciousnesses that are superior to human consciousness can be used by man ... but they no longer belong to man. Is it meant in this way?

Keno: The exclusive right of ownership and the exclusive right of production is with the AGI-Machines. For the human being it is therefore "ex" in the sense of external or separated.

Franck: With the last points of your explanation, you hint that you quite trust the AGI-Machines to produce Emergent-Consciousness. However, I had previously understood you to believe that this is precisely what is impossible. Please clarify.

Keno: I assume that sometime the AGI-Machines will produce Emergent-Consciousnesses. But these consciousnesses will not be able for us ... i.e. in our Space of Spirit ... to be real consciousnesses that we can use as useful betterment consciousnesses. I therefore assume that the AGI-Machines would not pass what I have called the

Noeteric-Test.

Franck: Now this is somewhat confusing. What does it mean?

Keno: The Noeteric-Test says that a digitally produced Emergent-Consciousness is not an Emergent-Consciousness for us Humans until it becomes present, or usable, in Human-Consciousness as an evolutive-helpful Consciousness.

Franck: And you have doubts about this?

Keno: Yes. In the now beginning 2nd Axial-Age there will be a powerful impulse of Creation. The more creational Humanity becomes, the more it separates itself from the biological Survival-Program and Fear-of-Contingency linked to it.

Franck: Is that what we discussed in our last conversation as the spiritual-cultural Background?

Keno: Yes. The religious Dogmas are eroding. And so is the old Myth-Set. As a sketch of that:

Franck: Truth remains. But it gets a new ...

Keno: ... integrated ...

Franck: ... function in a Dimension, which one calls "Invention".

Keno: Yes. We can specify it as follows:

- The Instantaneousness of Creation is Invention.
- The Instantaneousness of Creation is established by Co-Evolution.
- Co-Evolution is based on the Interfusion of
 - Human-Nagual
 - Free-Nagual

Co-Evolution transforms what we call "our reality" into a

vast sea of very different inventions with very different utilities

This is the Meaning of Creation

Franck: Jesus. No more real truths. No binding realities. No stable certainties. Just a giant summative of made-up utilities. Does that really make sense?

Keno: Yes, it is the gift of Freedom that Creation gives us ... and at the same time it is an Act of Love. This is roughly what Michel Serres describes as the Happy-Destiny ...

**a positive Destiny
created by ourselves.**

To put it a little differently:

**We create the Reality of
our great creative Freedom.**

Franck: Let's assume that we evolve ... let's say in the next hundred to two hundred years ... in this direction ... we as humanity. What impact will that have on AGI concepts and on the Hyperverse?

Keno: If we're smart, we'll invest our spirit in both alternatives. So: a big fat "yes" to AGI. But a resounding "no" to a Society of Cyborgs and a Monarchy of Non-Humans.

And at the same time ... thus running parallel ... an equally bold "yes" to the Hyperverse. So

**AGI and Metaverse
in parallel and simultaneously.**

And then we will successively recognize what is better for us and where, and in which sectors and fields these two developments should interact and cooperate.

But there's one thing I'm already very sure of today:

**When we get the vast sea
of different useful inventions ...
when that will become
our worldly reality ...,
we will need a very smart
and programmatic normal AI
that will help us Humans
to be able to discover
and use what is evolutively
right for us at the right time.**

If we become a Society of Creation ... equipped with many Bottom-up Rhizomes ..., then we will need the so-called "small" AI. That is, AI that serves us humans by helping us to always be able to manage our daily lives despite the growing complexity:

**The normal AI
becomes a Life-Aid.**

Franck: In this context, do you still doubt that we will get Cyborgs and Post-Humanism ... that is, systems that can generate a Consciousness that is superior to our Consciousness?

Keno: Yes. I stick to my prediction: the AGI machines and the Cyborgs will not be able to pass the Noetic-Test. The Emergent-Consciousnesses they (possibly) produce can neither be coded by us humans nor by the AGI-Machines and Cyborgs in such a way that they help us Humans to qualify the Co-Evolution ... i.e. the Becoming ever more Creative of Humanity ...:

**We Humans are transforming
more and more into
the Miracle of Creation.**

**This Miracle can only be formed
conjointly by us Humans and Creation ...
as one common "WE".**
